Subject: Phase II Soil and Groundwater Investigation Report
Voluntary Cleanup Program
Super Salvage, Inc., Parcel at Buzzard Point, Square 0605, Lot 0802
Washington, D.C.

Ladies and Gentlemen:

Haley & Aldrich, Inc. (Haley & Aldrich) prepared this Phase II Soil and Groundwater Investigation Report (Report) for the Super Salvage, Inc., (Super Salvage) parcel at Buzzard Point located in Washington, D.C. ([Site]; Figure 1). The objective of this soil and groundwater investigation was to provide an evaluation of the potential impacts associated with the recognized environmental conditions (RECs) at the Site identified in the “Report on ASTM Phase I Environmental Site Assessment” dated 30 August 2013 (Haley & Aldrich, 2013a). The investigation was conducted in a manner consistent with ASTM E1903-11 Standard Practice for Environmental Site Assessments: Phase II Environmental Site Assessment Process. The conclusions and recommendations provided in this Report will assist the application for Voluntary Cleanup Program prepared for the District of Columbia Department of General Services.

Background

The Site is bound by Potomac Avenue, SW to the north, S Street, SW to the south, 1st Street, SW to the east and a property owned by Rollingwood Real Estate, LLC, (Rollingwood) property to the west, and is currently occupied by a salvage yard for diverse metal structures. A Phase I environmental site assessment was conducted at the Site that identified the following RECs:

- Potentially unlined/unpaved sump that collects Site run-off;
- Heavy staining of concrete;
- Oil layer in secondary containment under aboveground storage tanks (ASTs); and
- Concrete staining next to the northern AST.

The Site is planned for redevelopment as part of the new D.C. United soccer stadium. At this time, design drawings have not been prepared for the new stadium. For the purpose of the Voluntary

Cleanup Program application, an excavation of up 10 feet below ground surface (bgs) has been assumed for foundation construction of the proposed stadium. The soil investigation considered this depth of excavation to assess soil disposition during demolition.

Subsurface Investigation

Soil and groundwater investigation activities were conducted at the Site in order to evaluate subsurface conditions and assess whether current and/or former operations at and adjacent to the Site have impacted soil and groundwater quality. These investigation activities were conducted at the Site between 9 and 27 April 2015 at the identified REC locations. Additionally, samples were collected north of the Site to investigate impacts to the adjacent property, due to Super Salvage's use of that parcel.

The following proposed sample locations were not accessible during the field investigation, therefore samples were not collected:

- Sample location GTW-605-802-3 (underlain by a significant amount of concrete);
- Sample locations GTW-605-802-4 and GSS-605-802-5 (located under storage piles); and
- Sample location GTW-605-802-8 (underlain by a significant amount of concrete).

At select locations, temporary groundwater monitoring wells were installed for groundwater sample collection and analysis. The sample analyses at each location were selected based on the potential chemicals of concern associated with the RECs. Soil and groundwater sample locations are shown in Figure 2.

SOIL SAMPLING

Soil samples were collected during advancement of direct-push borings (GSS-605-802-10, GSS-605-802-11, and GSS-605-802-12) and installation of the temporary groundwater monitoring wells (GTW-605-802-1, GTW-605-802-2, GTW-605-802-6, GTW-605-802-7, GTW-605-802-9). Borings were advanced using a track-mounted direct-push drill rig to depths ranging from 10 to 30 feet bgs. Each boring was continuously logged in accordance with the Unified Soil Classification System. Continuous soil cores were collected with hydraulic-percussive driving of a stainless steel sampling probe equipped with dedicated acetate tube liners. Soil cores were observed and documented visually for discoloration and screened for the presence of volatile organic compounds (VOCs) using a photoionization detector (PID). The soil sample was collected from the depth interval exhibiting the highest PID reading. Samples were placed in a cooler with ice and submitted for analysis to Pace Analytical Services, Inc., (Pace) under standard chain of custody procedures.

Boring logs are provided as Appendix A.

GROUNDWATER SAMPLING

Groundwater samples were collected from temporary groundwater monitoring wells (GTW-605-802-1, GTW-605-802-2, GTW-605-802-6, GTW-605-802-7, GTW-605-802-9) installed after completion of direct-push borings to 30 feet bgs. Temporary polyethylene chloride casing was installed with 5 feet of screen from approximately 23 to 30 feet bgs. Samples were collected using low-flow sampling techniques. Field parameters were measured during purging using an in-line flow cell. Groundwater samples were collected after field parameters stabilized in accordance with standard operating procedures. Samples were collected directly from dedicated plastic tubing installed in each well into laboratory-provided containers in a manner to avoid sample agitation and constituent volatilization. Samples were placed in a cooler with ice and submitted for analysis to Pace under standard chain of custody procedures.

Boring logs are provided as Appendix A.

SUBSURFACE FINDINGS

The subsurface investigation activities described herein did not define the lateral and vertical extent of chemical concentrations in soil and groundwater at the Site. The objective of this subsurface investigation was to explore the identified RECs to evaluate current conditions and assess the nature and general magnitude of potential impacts.

Soil and groundwater screening levels were selected for the protection of human health and groundwater quality based on the understanding that the Site will be redeveloped into a professional soccer stadium.

Soil Results

Soil sample analytical results were compared to the following screening levels:

- DC Tier 0 Soil Standards from the Tier 0 Standards Final Rulemaking published at 40 DCR 7835, 7892 (12 November 1993), as amended by Final Rulemaking published at 46 DCR 7699 (1 October 1999); and
- Environmental Protection Agency (EPA) Regional Screening Level for Industrial Soil from the EPA Regional Screening Level Tables (May 2014).

For the purpose of this Report, “soil screening levels” are the lower of the above screening levels. Soil sample collection depths ranged from 0 to 15 feet bgs. The following summarizes the results by REC.

- Unlined/unpaved sump (sample locations DP-001 and DP-002): Arsenic, lead, benzo(a)pyrene, and diesel range total petroleum hydrocarbons (TPH-DRO) were detected at concentrations above soil screening levels. Soil samples were not submitted for polychlorinated biphenyl (PCB) analysis because soil samples collected in the same general area at the adjacent Rollingwood property did not PCB concentrations above soil screening levels (Haley & Aldrich, 2013b).

- Heavy staining of concrete (GSS-605-802-11): Arsenic was detected at a concentration above the soil screening level. Additionally, the highest PID reading was recorded at a depth of 10 to 15 feet bgs, therefore the soil sample was collected from this interval.
- Oil layer in secondary containment under AST (sample locations GTW-605-802-1, GTW-605-802-2, and GSS-605-802-12): Arsenic and TPH-DRO were detected at concentrations above soil screening levels.
- Concrete staining next to northern AST (sample locations GTW-605-802-9 and GSS-605-802-10): Arsenic, lead, PCBs, ethylbenzene, and TPH-DRO were detected at concentrations above soil screening levels. Reported detection limits for PAHs were elevated (due to sample dilution) above soil screening levels.
- Impacts to the adjacent property (sample locations GTW-605-802-6 and GTW-605-802-7): Arsenic and TPH-DRO were detected at concentrations above soil screening levels. Reported detection limits for PAHs were elevated (due to sample dilution) above soil screening levels.

The reported concentrations of arsenic and lead in soil above the soil screening levels may be within naturally occurring background at the Site, and if so, would not warrant remediation.

For the “high” order of magnitude cost of soil remediation (see Summary and Recommendations) at the northern AST area and impacts to the adjacent property, it was conservatively assumed that PAHs are present in soil at concentrations greater than the soil screening levels in these areas until future investigation/sampling confirms otherwise.

Soil sample analytical results and soil screening levels are provided in Table I. Laboratory analytical reports are provided as Appendix B.

Groundwater Results

Groundwater sample analytical results were compared to the following screening levels:

- DC Tier 1 Risk-based groundwater screening levels for indoor and outdoor inhalation of the resident child (building occupant) from the Risk-Based Corrective Action Technical Guidance, Table 5-8 (June 2011);
- DC Tier 1 Risk-based groundwater screening levels for dermal contact of the construction worker from the Risk-Based Corrective Action Technical Guidance, Table 5-8 (June 2011) and
- EPA regional maximum contaminant levels from the EPA Regional Screening Level (RSL) Summary Table (January 2015).

For the purpose of this Report, “groundwater screening levels” are the lower of the above screening levels. The following summarizes the results by REC.

- Unlined/unpaved sump (soil sample locations DP-001 and DP-002): Groundwater samples were not collected.

- Heavy staining of concrete (soil sample location GSS-605-802-11): Groundwater samples were not collected.
- Oil layer in secondary containment under AST (sample locations GTW-605-802-1 and GTW-605-802-2): Arsenic was detected at concentrations above groundwater screening levels. Reported detection limits for thallium and select semi-volatile organic compounds ([SVOCs]; benzo[a]pyrene, and pentachlorophenol) were elevated above groundwater screening levels.
- Concrete staining next to northern AST (sample location GTW-605-802-9): Antimony, arsenic, lead, and methylene chloride were detected at concentrations above groundwater screening levels. Reported detection limits for thallium, select VOCs (1,2-dibromo-3-chloropropane, 1,2-dibromoethane and vinyl chloride), and select SVOCs (benzo[a]pyrene, hexachlorobenzene, and pentachlorophenol) were elevated above groundwater screening levels.
- Impacts to the adjacent property (sample locations GTW-605-802-6 and GTW-605-802-7): Lead and methylene chloride were detected at concentrations above the groundwater screening level. Reported detection limits for thallium, select VOCs (1,2-dibromo-3-chloropropane, 1,2-dibromoethane and vinyl chloride), and select SVOCs (benzo[a]pyrene, and pentachlorophenol) were elevated above groundwater screening levels.

The reported concentrations of arsenic in groundwater above the groundwater screening level may be within naturally occurring background at the Site, and if so, would not warrant remediation.

Although detection limits for SVOCs (benzo(a)pyrene, hexachlorobenzene, and pentachlorophenol) in groundwater were above groundwater screening levels, there were no other SVOCs detected. PAHs are usually reported as constituents of higher molecular weight TPH mixtures, such as TPH-DRO and oil range total petroleum hydrocarbons (TPH). Typically when detected, more than one PAH is reported. TPH mixtures were not detected in groundwater, and although benzo(a)pyrene was reported at an elevated detection limit slightly greater than the groundwater screening level, no other PAHs were detected. It is therefore unlikely that benzo(a)pyrene is detected at concentrations greater than the groundwater screening level in the groundwater samples collected at the Site.

Methylene chloride was not detected in soil samples in proximity to the groundwater sample locations with reported methylene chloride in groundwater above groundwater screening levels. Methylene chloride is a typical laboratory contaminant. Since a potential source of methylene chloride was not identified in soil at these locations, detections of methylene chloride in the groundwater samples collected at locations GTW-605-802-6 and GTW-605-802-9 may be attributed to laboratory contamination.

Thallium was not present in concentrations above the soil screening level. Although the detection limit for thallium in groundwater is greater than the groundwater screening level, it appears unlikely that concentrations of thallium are of concern at the Site. Other VOCs with elevated detection limits and thallium were not detected in soil and are assumed not to be present in groundwater without this pathway.

Groundwater sample analytical results and groundwater screening levels are provided in Table I. Laboratory analytical reports are provided as Appendix B.

Summary and Recommendations

In summary, soil and groundwater samples were collected for evaluation of the presence of chemicals at the five identified RECs associated with the Site; four sample locations were inaccessible. The following is recommended:

- Groundwater sample collection at the unlined/unpaved sump area to investigation concentrations and field observations noted at the adjacent Rollingwood property (Haley & Aldrich, 2013b);
- Sample collection at the inaccessible sample locations;
- Preparation of a Site-specific background metals evaluation for soil and groundwater;
- Preparation of a soil management plan to provide guidance on the demolition environmental monitoring process; and
- Implementation of the soil management plan during Site redevelopment to provide environmental oversight of demolition activities and ensure soil is properly segregated and disposed of off-Site.

Based on the analytical results collected to date, soil remediation may be required to reduce the threat to human health for the on-Site construction worker and future occupant and to reduce the threat to groundwater quality. Potential order of magnitude cost impacts from the identified RECs at the Site range from \$240,000 to \$3,600,000. These costs and their associated assumptions are summarized in Table 3. The soil screening levels and groundwater screening levels used for evaluation of impacts at the Site do not account for cumulative health risks. Additionally, groundwater remediation and/or vapor intrusion mitigation in the construction of the stadium may be required to reduce the threat to human health.

These sampling/characterization recommendations and the potential order of magnitude costs for soil remediation are based on the currently available data understanding that several unanticipated Site restrictions associated with an active salvage yard and unknown subsurface restrictions were encountered during the investigation activities described in this Report. The presence of a significant layer of concrete under portions of the Site restricted investigation at the locations indicated previously.

Limitations

All recommendations are based solely upon Site conditions in existence at the time of performance of services. Haley & Aldrich is unable to report on, or accurately predict events that may impact the Site or system following preparation of this document, whether occurring naturally or caused by external forces. The recommendations provided by Haley & Aldrich are based solely on the scope of work

conducted and the sources of information referenced in this document. Services hereunder were performed in accordance with our agreement and understanding with, and solely for the use of McKissack & McKissack. Any additional information that becomes available concerning this Site or system should be provided to Haley & Aldrich so that any further recommendations may be reviewed and modified as necessary. Haley & Aldrich is not responsible for the subsequent separation, detachment, or partial use of this document. No warranty or guarantee, whether expressed or implied, is made with respect to the recommendations expressed in this report. Any reliance on this report by a third party shall be at such party's sole risk.

We appreciate the opportunity to provide consulting services on this project. Please do not hesitate to call if you have any questions or comments.

Sincerely yours,
HALEY & ALDRICH, INC.

Dana L. Kennard

NOTES

Bold where detected; highlighted where exceeds

ft bgs = feet below ground surface

mg/kg = milligrams per kilogram

µg/kg = micrograms per kilogram

-- = screening level not available/sample not analyzed

< = not detected at the indicated reporting limit

J = estimated value

TABLE 3

ORDER OF MAGNITUDE SOIL REMEDIATION COSTS

SUPER SALVAGE, INC., PARCEL AT BUZZARD POINT, SQUARE 0605, LOT 0802

WASHINGTON, D.C.

Recognized Environmental Concern (REC)	Limited Investigation Findings	Potential Impact on Proposed Development	Potential Remedies	Excavation Depth (ft bgs)	Order of Magnitude Opinion of Cost (Range)				
Oil Layer in AST Secondary Containment (southeast corner of site)	Arsenic and TPH-DRO were detected in soil samples above screening levels ¹ . <u>Sample Locations</u> GTW-605-802-1 GTW-605-802-2 GSS-605-802-12	Soil excavated during construction with metals and TPH-DRO concentrations exceeding screening levels is not appropriate for unrestricted use as fill (may require appropriate treatment/disposal).	<p>1. Prepare a Soil Management Plan to guide construction activities and proper management of impacted soil encountered during construction and dispose of impacted soil excavated during construction as non-hazardous waste at an off-site disposal facility.</p> <p>2. Conduct a background metals evaluation to potentially reduce the volume of soil requiring off-site disposal based on metals concentrations.</p>	10 20	\$ 57,150	Localized impacted soil with concentrations of TPH-DRO requires off-site disposal (approximately 300 cubic yards) and a site-specific background metals evaluation is performed to verify that concentrations of arsenic in soil are within background levels. Estimate \$27.50 per ton for transportation and disposal.	\$ 202,960	Impacted soil with concentrations of metals and TPH-DRO requires off-site disposal (approximately 1,780 cubic yards). Estimate \$45.00 per ton for transportation and disposal.	
			\$ 78,520		Localized impacted soil with concentrations of TPH-DRO requires off-site disposal (approximately 600 cubic yards) and a site-specific background metals evaluation is performed to verify that concentrations of arsenic in soil are within background levels. Estimate \$27.50 per ton for transportation and disposal.	\$ 369,600	Impacted soil with concentrations of metals and TPH-DRO requires off-site disposal (approximately 3,600 cubic yards). Dewatering limited to 4,000 gallons pumped to an on-site tank via vacuum truck, removal and disposal as petroleum contaminated water. Estimate \$45.00 per ton for transportation and disposal.		
Heavy Concrete Staining	Arsenic was detected in soil above screening levels. <u>Sample Locations</u> GTW-605-802-4 ² GTW-605-802-5 ² GSS-605-802-11	If off-site disposal of excavated soil is required, soil containing metals may require disposal at a permitted landfill.	<p>1. Prepare a Soil Management Plan to guide construction activities and proper management of impacted soil encountered during construction and dispose of impacted soil excavated during construction as non-hazardous waste at an off-site disposal facility.</p> <p>2. Conduct a background metals evaluation to potentially reduce the volume of soil requiring off-site disposal based on metals concentrations.</p>	10 20	\$ 15,000	Arsenic concentrations in soil may be consistent with background, verifiable with completion of site-specific background metals evaluation. Costs include conducting this evaluation only.	\$ 44,350	Impacted soil with concentrations of metals requires off-site disposal (approximately 150 cubic yards). Estimate \$27.50 per ton for transportation and disposal.	
			\$ 15,000		\$ 66,605		Impacted soil with concentrations of metals requires off-site disposal (approximately 300 cubic yards). Dewatering limited to 4,000 gallons pumped to an on-site tank via vacuum truck, removal and disposal as petroleum contaminated water. Estimate \$27.50 per ton for transportation and disposal.		
Concrete Staining Beneath AST (northern portion of the site)	Arsenic, lead, ethylbenzene, PCBs, and TPH-DRO were detected in soil samples above screening levels. Also the possibility for the presence of PAHs in soil. <u>Sample Locations</u> GTW-605-802-9 GTW-605-802-10	Soil excavated during construction with metals, VOC, TPH-DRO, and PCB concentrations exceeding screening levels is not appropriate for unrestricted use as fill (may require appropriate treatment/disposal). Elevated detection levels did not allow proper evaluation of PAHs in soil.	<p>1. Prepare a Soil Management Plan to guide construction activities and proper management of impacted soil encountered during construction and dispose of impacted soil excavated during construction as non-hazardous waste at an off-site disposal facility.</p> <p>2. Conduct a background metals evaluation to potentially reduce the volume of soil requiring off-site disposal based on metals concentrations.</p>	10 20	\$ 57,800	Localized impacted soil with concentrations of VOCs, TPH-DRO, and PCBs requires off-site disposal (approximately 300 cubic yards) and a site-specific background metals evaluation is performed to verify that concentrations of arsenic in soil are within background levels. Estimate \$27.50 per ton for transportation and disposal.	\$ 152,960	Impacted soil with concentrations of metals, VOCs, TPH-DRO, PCBs, and PAHs requires off-site disposal (approximately 1,200 cubic yards). Estimate \$45.00 per ton for transportation and disposal.	
			\$ 79,690		Localized impacted soil with concentrations of VOCs, TPH-DRO, and PCBs requires off-site disposal (approximately 600 cubic yards) and a site-specific background metals evaluation is performed to verify that concentrations of arsenic in soil are within background levels. Estimate \$27.50 per ton for transportation and disposal.	\$ 270,600	Impacted soil with concentrations of metals, VOCs, TPH-DRO, PCBs, and PAHs requires off-site disposal (approximately 2,400 cubic yards). Dewatering limited to 4,000 gallons pumped to an on-site tank via vacuum truck, removal and disposal as petroleum contaminated water. Estimate \$45.00 per ton for transportation and disposal.

SUPER SALVAGE, INC., PARCEL AT BUZZARD POINT, SQUARE 0605, LOT 0802

WASHINGTON, D.C.

Recognized Environmental Concern (REC)	Limited Investigation Findings	Potential Impact on Proposed Development	Potential Remedies	Excavation Depth (ft bgs)	Order of Magnitude Opinion of Cost (Range)						
Unlined/Unpaved Sump (southwest corner of site)	Arsenic, lead, PAHs, and TPH-DRO were detected in soil above screening levels. <u>Sample Locations</u> DP-001 DP-002 GTW-605-802-3 ²	Soil excavated during construction with metals, TPH-DRO, and PAH concentrations exceeding screening levels is not appropriate for unrestricted use as fill (may require appropriate treatment/disposal). The presence of PCBs in soil was not evaluated in this area.	1. Prepare a Soil Management Plan to guide construction activities and proper management of impacted soil encountered during construction and dispose of impacted soil excavated during construction as non-hazardous waste at an off-site disposal facility. 2. Conduct a background metals evaluation to potentially reduce the volume of soil requiring off-site disposal based on metals concentrations.	10	\$ 51,155	Localized impacted soil with concentrations of TPH-DRO, PAHs, and PCBs requires off-site disposal (approximately 150 cubic yards) and a site-specific background metals evaluation is performed to verify that concentrations of arsenic in soil are within background levels. Estimate \$45.00 per ton for transportation and disposal.	\$ 133,940	Impacted soil with concentrations of metals, TPH-DRO, PCBs, and PAHs requires off-site disposal (approximately 1,000 cubic yards). Estimate \$45.00 per ton for transportation and disposal.			
				20	\$ 69,065	Localized impacted soil with concentrations of TPH-DRO, PAHs, and PCBs requires off-site disposal (approximately 300 cubic yards) and a site-specific background metals evaluation is performed to verify that concentrations of arsenic in soil are within background levels. Estimate \$45.00 per ton for transportation and disposal.	\$ 233,475	Impacted soil with concentrations of metals, TPH-DRO, PCBs, and PAHs requires off-site disposal (approximately 2,000 cubic yards). Dewatering limited to 4,000 gallons pumped to an on-site tank via vacuum truck, removal and disposal as petroleum contaminated water. Estimate \$45.00 per ton for transportation and disposal.			
Impacts to Adjacent Properties	Arsenic and TPH-DRO were detected in soil samples above screening levels. Also the possibility for the presence of PAHs in soil. <u>Sample Locations</u> GTW-605-802-6 GTW-605-802-7 GTW-605-802-8 ²	Soil excavated during construction with metals, TPH-DRO, and PCB concentrations exceeding screening levels is not appropriate for unrestricted use as fill (may require appropriate treatment/disposal). Elevated detection levels did not allow proper evaluation of PAHs in soil.	1. Prepare a Soil Management Plan to guide construction activities and proper management of impacted soil encountered during construction and dispose of impacted soil excavated during construction as non-hazardous waste at an off-site disposal facility. 2. Conduct a background metals evaluation to potentially reduce the volume of soil requiring off-site disposal based on metals concentrations.	10	\$ 57,150	Localized impacted soil with concentrations of TPH-DRO requires off-site disposal (approximately 300 cubic yards) and a site-specific background metals evaluation is performed to verify that concentrations of arsenic in soil are within background levels. Estimate \$27.50 per ton for transportation and disposal.	\$ 151,400	Impacted soil with concentrations of metals, TPH-DRO, and PAHs requires off-site disposal (approximately 1,200 cubic yards). Estimate \$45.00 per ton for transportation and disposal.			
				20	\$ 78,520	Localized impacted soil with concentrations of TPH-DRO requires off-site disposal (approximately 600 cubic yards) and a site-specific background metals evaluation is performed to verify that concentrations of arsenic in soil are within background levels. Estimate \$27.50 per ton for transportation and disposal.	\$ 268,000	Impacted soil with concentrations of metals, TPH-DRO, and PAHs requires off-site disposal (approximately 2,400 cubic yards). Dewatering limited to 4,000 gallons pumped to an on-site tank via vacuum truck, removal and disposal as petroleum contaminated water. Estimate \$45.00 per ton for transportation and disposal.			
Order of Magnitude Cost Range for Impacts on Proposed Development from Identified RECs:				10	\$ 238,255	to	\$ 1,657,094	High costs include profiling and off-site disposal to the specified depth for the entire site, excluding the office building footprint (i.e., chemicals above screening levels in soil are not just limited to the identified RECs but are prevalent throughout the site). Dewatering costs include costs to obtain discharge permits and design, install, and maintain treatment system in-line with normal dewatering equipment for up to 3 months.			
				20	\$ 320,795		\$ 3,601,688				

NOTES

1. Screening levels are the lower of the DC Tier 0 Standards and the EPA Regional Screening Levels for industrial soil

2. Sample location inaccessible; sample not collected

ft bgs = feet below ground surface

AST = aboveground storage tank

PCB = polychlorinated biphenyl

TPH = total petroleum hydrocarbons

TPH-DRO = TPH diesel range

PAH = polycyclic aromatic hydrocarbon

VOC = volatile organic compound

GENERAL ASSUMPTIONS

Order of magnitude costs are for discussion and planning purposes only and are not budgetary costs

Costs do not include impacts to adjacent properties

Waste disposal costs include transportation and disposal only; loading and stockpile management costs are assumed to be part of the redevelopment contractor costs

Costs do not include additional investigation/delineation sampling

Costs do not include groundwater remediation or potential vapor intrusion mitigation

Profiling sampling frequency and analyses may change based on disposal facility requirements

Costs do not include preparation and implementation of a Stormwater Pollution Prevention Plan

Costs include on-site monitoring during soil/groundwater removal (assume \$2,000 per day, excavating 250 cubic yards of impacted soil per day)

Confirmation sampling frequency based on 1 sample per 200 square feet of excavation sidewall and 1 sample per 400 square feet of excavation bottom. Analyses based on chemicals exceeding screening levels.

RE: Project: Buzzard Point 40223-002 Rev1
Pace Project No.: 92245059

Dear Dana Kennard:

Enclosed are the analytical results for sample(s) received by the laboratory on April 10, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

This report was revised to report down to the MDL for all parameters.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Benjamin

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245059

Sample: GTW-605-802-9-1 Lab ID: 92245059001 Collected: 04/09/15 09:00 Received: 04/10/15 10:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245059

Sample: GTW-605-802-6-1 Lab ID: 92245059002 Collected: 04/09/15 13:15 Received: 04/10/15 10:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Pace Project No.: 92245059

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

- 1g The internal standard response is below criteria. No hits associated with this internal standard. Results unaffected by high bias.
- D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
- L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- P3 Sample extract could not be concentrated to the routine final volume, resulting in elevated reporting limits.
- R1 RPD value was outside control limits.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.

RE: Project: Buzzard Point 40223-002 Rev1
Pace Project No.: 92245073

Dear Dana Kennard:

Enclosed are the analytical results for sample(s) received by the laboratory on April 11, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

This report was revised to report down to the MDL for all parameters.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Benjamin

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

Sample: GSS-603-800-1-1 Lab ID: 92245073001 Collected: 04/10/15 08:00 Received: 04/11/15 09:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

Sample: GSS-603-800-1-2 Lab ID: 92245073002 Collected: 04/10/15 08:15 Received: 04/11/15 09:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

Sample: GSS-603-800-1-2 Lab ID: 92245073002 Collected: 04/10/15 08:15 Received: 04/11/15 09:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

Sample: GSS-603-800-3-1 Lab ID: 92245073003 Collected: 04/10/15 08:45 Received: 04/11/15 09:00 Matrix: Solid
Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

Sample: GSS-603-800-3-2 Lab ID: 92245073004 Collected: 04/10/15 09:00 Received: 04/11/15 09:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

Sample: GSS-603-800-2-1 Lab ID: 92245073005 Collected: 04/10/15 09:15 Received: 04/11/15 09:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

Sample: GSS-603-800-2-2 Lab ID: 92245073006 Collected: 04/10/15 09:30 Received: 04/11/15 09:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

ANALYTICAL RESULTS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

Sample: GTW-605-802-7-1 Lab ID: 92245073007 Collected: 04/10/15 09:45 Received: 04/11/15 09:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

- 1g Reanalysis conducted in excess of EPA method holding time. Results for this sample confirm original analysis performed in hold time.
- 2g The internal standard response is below criteria. No hits associated with this internal standard. Results unaffected by high bias.
- C9 Common Laboratory Contaminant.
- D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
- IO The internal standard response was outside the laboratory acceptance limits confirmed by reanalysis. The results reported are from the most QC compliant analysis.
- L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- P2 Re-extraction or re-analysis could not be performed due to insufficient sample amount.
- R1 RPD value was outside control limits.
- S0 Surrogate recovery outside laboratory control limits.

QUALIFIERS

Project: Buzzard Point 40223-002 Rev1

Pace Project No.: 92245073

ANALYTE QUALIFIERS

- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
- S3 Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.
- S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

Document Name: Sample Condition Upon Receipt (SCUR)	Document Revised: September 22, 2014 Page 1 of 2
Document Number: F-CHR-CS-003-rev.15	Issuing Authority: Pace Huntersville Quality Office

Client Name: Haley + Aldrich

Courier: FedEx UPS USPS Client Commercial Pace Other _____

Custody Seal on Cooler/Box Present: yes no Seals intact: yes no

Packing Material: Bubble V^{ip} Bubble Bags None Other _____

Thermometer Used: IR Gun T1401 Type of Ice: Wet Blue None Samples on ice, cooling process has begun

Temp Correction Factor T1401 No Correction

Corrected Cooler Temp.: 5.1 °C

Biological Tissue is Frozen: Yes No N/A

Temp should be above freezing to 6°C

Comments:

RE: Project: Buzzard Point, GW Rev3
Pace Project No.: 92246759

Dear Dana Kennard:

Enclosed are the analytical results for sample(s) received by the laboratory on April 23, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

This report was revised to alter sample IDs, per client request, it was also revised to report down to the MDL for all parameters.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Benjamin

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

ANALYTICAL RESULTS

Project: Buzzard Point, GW Rev3

Pace Project No.: 92246759

Sample: GSS-605-802-12-1 Lab ID: 92246759002 Collected: 04/22/15 16:00 Received: 04/23/15 09:40 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report					Analyzed	CAS No.	Qual

QUALIFIERS

Project: Buzzard Point, GW Rev3

Pace Project No.: 92246759

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

- 1g The internal standard response is below criteria. No hits associated with this internal standard. Results unaffected by high bias.
- 2g The sample was weighed and preserved in the laboratory from a soil jar. Sample was not preserved within 48 hours.
- D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.
- L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- R1 RPD value was outside control limits.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.
- S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

RE: Project: Buzzard Point, Washington DC R1
Pace Project No.: 92247031

Dear Dana Kennard:

Enclosed are the analytical results for sample(s) received by the laboratory on April 24, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

This report was revised to report down to the MDL for all parameters.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Benjamin
nicole.benjamin@pacelabs.com
Project Manager

ANALYTICAL RESULTS

Project: Buzzard Point, Washington DC R1

Pace Project No.: 92247031

Sample: GTW-605-802-1-1 Lab ID: 92247031001 Collected: 04/22/15 10:57 Received: 04/24/15 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: Buzzard Point, Washington DC R1

Pace Project No.: 92247031

Sample: GSS-605-802-11-1 Lab ID: 92247031003 Collected: 04/22/15 08:19 Received: 04/24/15 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report					Analyzed	CAS No.	Qual

QUALIFIERS

Project: Buzzard Point, Washington DC R1
 Pace Project No.: 92247031

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

P3 Sample extract could not be concentrated to the routine final volume, resulting in elevated reporting limits.

R1 RPD value was outside control limits.

R2 RPD value was outside control limits due to matrix interference

S4 Surrogate recovery not evaluated against control limits due to sample dilution.

S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

RE: Project: Buzzard Point, Washington DC R2
Pace Project No.: 92247494

Dear Dana Kennard:

Enclosed are the analytical results for sample(s) received by the laboratory on April 29, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

This report was revised to report down to the MDL for all parameters and modify sample IDs to match the update Chain of Custody, per client request.

Insufficient sample volume was provided to properly analyze for VOCs, preserved aliquots were consumed for GRO analysis.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Benjamin
nicole.benjamin@pacelabs.com
Project Manager

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

without the written consent of Pace Analytical Services, Inc..

QUALIFIERS

Project: Buzzard Point, Washington DC R2

Pace Project No.: 92247494

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Buzzard Point, Washington DC R1
Pace Project No.: 92247497

Dear Dana Kennard:

Enclosed are the analytical results for sample(s) received by the laboratory on April 29, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

This report was revised to report down to the MDL for all parameters.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Benjamin
nicole.benjamin@pacelabs.com
Project Manager

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

without the written consent of Pace Analytical Services, Inc..

QUALIFIERS

Project: Buzzard Point, Washington DC R1

Pace Project No.: 92247497

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether, Styrene, and Vinyl chloride.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

P2 Re-extraction or re-analysis could not be performed due to insufficient sample amount.

CHAIN-OF-CUSTODY / Analytical Request Document

The Chain-of-Custody is a LEGAL DOCUMENT. All relevant fields must be completed accurately.

Section A
Required Client Information:

Company: Haley & Aldrich, Inc.
 Address: na 7926 JONES BRANCH DRIVE
 na, na 22102 SUITE 870, MCLEAN, VA 22102
 Email: DSCATTENWOLF@HALEYALDRICH.COM
 Phone: Fax
 Requested Due Date: STANDARD TAT

Section B
Required Project Information:

Report To: Kennard, Dana / DAVE SCOTTENWOLF
 Copy To:
 Purchase Order #:
 Project Name: Buzzard Point
 Project #: T3102-3

Section C
Invoice Information:

Attention:
 Company Name:
 Address:
 Pace Quote:
 Pace Project Manager: nicole.benjamin@pacelabs.com,
 Pace Profile #: T3102-3
